

EXPAND YOUR MISSION CAPABILITIES WHILE LOWERING YOUR MISSION COSTS...

Enjoy improved performance and operational flexibility with **EPIC Performance Packages for the King Air 90, 200, 250, and 350 Series**. No matter the mission, operators can enjoy quieter operations with reduced climb and cruise RPM, increased payload, fuel and range capabilities from shorter runways and hot-high scenarios. Our Performance Enhancement Systems can be installed individually or combined in an EPIC Performance Package, saving aircraft owners even more!

Swept Blade Turbofan Propellers (SBTP)

- More thrust, less noise
- Short landing distances
- Operate at lower RPM
- Better runway acceleration
- Dramatically improves landing deceleration

Enhanced Performance Leading Edges (EPL)

- Eliminates droop, achieves proper airflow
- Improves short field and climb performance
- Reduces stall speeds, increases cruise speeds
- Improves wing load, enhances life of wing
- Maximizes intercooler effectiveness

Dual Aft Body Strakes (DABS)

- Better Pilot control and handling
- Reduced drag in all flight modes
- Quieter, smoother ride
- Reduces stress on aft stringers, rudder, etc.
- Reduces aft-body suction
- Increases aircraft stability

Ram Air Recovery System (RARS)

- Protects your engines:
 - Boosts engine power and overall performance
 - 18° reduction in ITT saves engine component wear and tear
 - F.O.D. protection from startup to shutdown
 - Longer engine life and reduced overhaul expenses
- Improves climb and performance

High Flotation Gear Doors (HFGD)

- Restore lost performance
- Improve aerodynamics allow for increased speed, range and loiter time
- Increases cruise speed by 4 to 10 knots
- Protects wheel wells, tires and brakes from the elements
- Clean and finished look

Crown Wing Lockers (CWLS)

- Add storage without compromising performance
- Watertight seals, fully self contained
- Quieter, smoother ride
- Carry up to 600 lbs. of cargo
- Zero performance loss
